Economics Class XII 2021-10-25 this book discusses samuel
pufendorf and his contributions to the development of the
european enlightenment and the emergence of economics as a
social science born in 1632 in saxony pufendorf wrote widely on
natural law ethics jurisprudence and political economy and was
one of the most important figures in early modern political
thought although his work fits within the intellectual framework
of natural jurisprudence there is an argument to be made that his
ideas promoted the development of economics as a distinct
discipline within the social sciences written by participants in
the 34th heilbronn symposium in economics and the social
sciences the contributions to this volume give an overview of
pufendorf s influence on other authors of the enlightenment such
as locke montesquieu and rousseau as well as addressing the
theoretical implications of his extensive writings further chapters
place a special focus on pufendorf s discussion of economic
matters such as property rights theory price theory taxation and
preferences and decision making the book concludes with

analyzing Pufendorf's influence on Adam Smith, his anticipations of elements of modern economic theory, and his impact on the history of economic thought, providing a fresh look at one of the foundational scholars of social science. This volume will be of interest to researchers and students of the history of economic thought, political economy, economic history, and political philosophy.

Economics Class XII - SBPD Publications [2022-23] 2022-02-15
seminar paper from the year 2014 in the subject economics
macro economics general grade a3 hacettepe university
department of economics course international political economy
language english abstract growth economics is the branch of
economics answering questions related to what are determinants
of economic growth whether is it possible to reach a
maintainable growth rate on the long run if it is preferable to let
governments interfere in market performance in order to fasten
rates of economic growth harrod and domar attempted to answer
these questions through applying keynes economics for
economic analysis they found that savings and investments
stable rates are the key for rapid long term growth especially in
developing countries therefore government intervention was

needed to help stimulate savings and investments years later solow and swan attempted to answer same questions through their neoclassical growth model in this model it was assumed that a maintained rising saving rates leads to transition from slow growth into fast growth path this meant a focus on technological progress however part of the growth was not explained by growth in production factors which are capital and labor solow stated that this unexplained factor was the residual or total factor productivity therefore government policies were assumed to be effective on aggregate output not on growth rates
