Computers For Seniors For Dummies 2015-09-15 there is a companion web site associated with the book vsicomputer wordpress com it contains chapter summaries links to relevant material and posts about items of news relevant to the book s contents computers have changed so much since the room filling bulky magnetic tape running monsters of the mid 20th century they now form a vital part of most people s lives and they are more ubiquitous than might be thought you may have more than 30 computers in your home not just the desktop and laptop but think of the television the fridge the microwave but what is the basic nature of the modern computer how does it work how has it been possible to squeeze so much power into increasingly small machines and what will the next generations of computers look like in this very short introduction darrel ince looks at the basic concepts behind all computers the changes in hardware and software that allowed computers to become so small and commonplace the challenges produced by the computer revolution especially whole new modes of cybercrime and security issues the internet and the advent of cloud computing and the promise of whole new horizons opening up with quantum computing and even computing using dna about the series the very short introductions series from oxford university press contains hundreds of titles in almost every subject area these pocket sized books are the perfect way to get ahead in a new subject quickly our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

The Star Wars Question & Answer Book about Computers

2011-02-09 most introductory books about computers are long detailed technical books such as those used in a computer

science course or else tutorials that provide instructions on how to operate a computer with little description of what happens inside the machine this book fits in the large gap between these two extremes it is for people who would like to understand how computers work without having to learn a lot of technical details only the most important things about computers are covered there is no math except some simple arithmetic the only prerequisite is knowing how to use a web browser as an alternative or adjunct to reading the book you can watch a series of short videos by going to youtube com and searching for understanding computers smartphones and the internet only current day technology is covered people who are interested in learning about how computers evolved from the earliest machines can read the companion book a concise history of computers smartphones and the internet while originally intended for people who are not in the computer field this book is also useful for those taking a coding course or an introductory computer science course even people already in the computer field will find things of interest in this book

Computers for Seniors Made Easy 1983 impelled by a demand for increasing american strength in the new global economy many educators public officials business leaders and parents argue that school computers and internet access will improve academic learning and prepare students for an information based workplace but just how valid is this argument in oversold and underused one of the most respected voices in american education argues that when teachers are not given a say in how the technology might reshape schools computers are merely souped up typewriters and classrooms continue to run much as they did a generation ago in his studies of early childhood high school and university classrooms in silicon valley larry cuban found that students and teachers use the new technologies far

less in the classroom than they do at home and that teachers who use computers for instruction do so infrequently and unimaginatively cuban points out that historical and organizational economic contexts influence how teachers use technical innovations computers can be useful when teachers sufficiently understand the technology themselves believe it will enhance learning and have the power to shape their own curricula but these conditions can't be met without a broader and deeper commitment to public education beyond preparing workers more attention cuban says needs to be paid to the civic and social goals of schooling goals that make the question of how many computers are in classrooms trivial

Repairing and Upgrading Your PC 2012-04-19 the all in one guide to buying using securing and transporting a laptop it's ten books in one if you want to take a computer with you on a trip to a coffee shop or into the kitchen when you're cooking laptops are just the ticket they're portable powerful and popular but they're not desktops so you'll want to know what you're doing from the get go this terrific ten minibooks in one book covers all the bases how to choose the best laptop for you what you need to know when you're on the road how to get more productive and more shows you how to keep your laptop running smoothly and safely at home at work in the classroom and on the road includes ten books in one choosing the best laptop setting up your laptop running basic windows operations using common applications playing with multimedia managing your power supply upgrading your laptop networking and linking to the internet protecting your laptop and troubleshooting common problems offers advice and tips on using your laptop safely and efficiently including what accessories you need reflects the very latest technologies including windows 7 and the new microsoft office 2010 this easy to follow for dummies guide tells you everything

Laptops All-in-One For Dummies

Computers in Your Future 2004 2008-03-11 a guide to understanding the inner workings and outer limits of technology and why we should never assume that computers always get it right in artificial unintelligence meredith broussard argues that our collective enthusiasm for applying computer technology to every aspect of life has resulted in a tremendous amount of poorly designed systems we are so eager to do everything digitally hiring driving paying bills even choosing romantic partners that we have stopped demanding that our technology actually work broussard a software developer and journalist reminds us that there are fundamental limits to what we can and should do with technology with this book she offers a guide to understanding the inner workings and outer limits of technology and issues a warning that we should never assume that computers always get things right making a case against techno Chauvinism the belief that technology is always the

solution broussard argues that it s just not true that social problems would inevitably retreat before a digitally enabled utopia to prove her point she undertakes a series of adventures in computer programming she goes for an alarming ride in a driverless car concluding the cyborg future is not coming any time soon uses artificial intelligence to investigate why students can t pass standardized tests deploys machine learning to predict which passengers survived the titanic disaster and attempts to repair the u s campaign finance system by building ai software if we understand the limits of what we can do with technology broussard tells us we can make better choices about what we should do with it to make the world better for everyone

Artificial Unintelligence 2017-09-01 the basics of computer arithmetic made enjoyable and accessible with a special program included for hands on learning the combination of this book and its associated virtual computer is fantastic experience over the last fifty years has shown me that there s only one way to truly understand how computers work and that is to learn one computer and its instruction set no matter how simple or primitive from the ground up once you fully comprehend how that simple computer functions you can easily extrapolate to more complex machines fred hudson retired engineer scientist this book along with the virtual diy calculator is an incredibly useful teaching and learning tool the interesting trivia nuggets keep you turning the pages to see what s next students will have so much fun reading the text and performing the labs that they won t even realize they are learning michael haghghi chairperson of the business and computer information systems division calhoun community college alabama at last a book that presents an innovative approach to the teaching of computer architecture written with authority and verve witty superbly illustrated and enhanced with many laboratory exercises this

book is a must for students and teachers alike dr albert koelmans lecturer in computer engineering university of newcastle upon tyne uk and the 2003 recipient of the easit eng gold award for innovative teaching in computer engineering packed with nuggets of information and tidbits of trivia how computers do math provides an incredibly fun and interesting introduction to the way in which computers perform their magic in general and math in particular the accompanying cd rom contains a virtual computer calculator called the diy calculator and the book s step by step interactive laboratories guide you in the creation of a simple program to run on your diy calculator how computers do math can be enjoyed by non technical individuals students of computer science electronics engineering and mathematics and even practicing engineers all of the illustrations and interactive laboratories featured in the book are provided on the cd rom for use by high school college and university educators as lecture notes and handouts for online resources and more information please visit the author s website at diycalculator.com

Computers in Your Future 2004 this history of computing focuses not on chronology what came first and who deserves credit for it but on the actual architectures of the first machines that made electronic computing a practical reality the book covers computers built in the united states germany england and japan it makes clear that similar concepts were often pursued simultaneously and that the early researchers explored many architectures beyond the von neumann architecture that eventually became canonical the contributors include not only historians but also engineers and computer pioneers an introductory chapter describes the elements of computer architecture and explains why being first is even less interesting for computers than for other areas of technology the essays contain a remarkable amount of new material even on well

known machines and several describe reconstructions of the historic machines these investigations are of more than simply historical interest for architectures designed to solve specific problems in the past may suggest new approaches to similar problems in today s machines contributors titiimaea f ala ilima lin ping ang william aspray friedrich l bauer andreas brennecke chris p burton martin campbell kelly paul ceruzzi i bernard cohen john gustafson wilhelm hopmann harry d huskey friedrich w kistermann thomas lange michael s mahoney r b e napper seiichi okoma hartmut petzold raúl rojas anthony e sale robert w seidel ambros p speiser frank h sumner james f tau jan van der spiegel eiti wada michael r williams

PCs For Dummies 2002 today we are awash in computerized bible games pastoral care software and church management systems with members personal information and giving records observe authors spiegel armstrong and bill but too often we blindly accept and use technology without asking the big questions questions like is it appropriate to our mission and ministry 40 days and 40 bytes will help your congregation explore technology so you can decide from a ministry and culture standpoint what you need to do the goal godly service not technological glitz the authors are uniquely qualified to help you think about the role of technology in your congregation all three are staff members with the indianapolis center for congregations which launched the innovative computers and ministry grants initiative in 1998 to help congregations address the challenges they face when using computer technology in their ministries in this book they share what they have learned in their work with 102 congregations there s no question your congregation is going to use computer technology the only question is how 40 days and 40 bytes will help you design technology that fits your ministry and mission

Computers and the World of the Future 1964 writers including vannevar bush and herbert a simon discuss the impact of the computer in its first twenty years writers discuss the extraordinary growth of the computer in its first twenty years and its use in fields as diverse as medicine and economics management and physics employed in areas once thought to be exclusively the province of the human mind the computer rendered profound changes in the traditional ways and means of decision making contributors c p snow walter a rosenblith norbert wiener vannevar bush herbert a simon howard w johnson marvin l minsky peter elias j c r licklider elting e morison philip m morse jay w forrester grace m hopper alan j perlis john r pierce robert c sprague claude e shannon charles c holt john g kemeny donald j marquis gene m amdahl sidney s alexander robert m fano and others
