written for students and academic survey researchers and market researchers engaged in comparative projects this text represents a unique collaboration that features the latest methodologies and research on global comparative surveys the utilization and operation of a set of six computer programs for the prediction of panel flutter at supersonic speeds by finite element methods are described the programs run individually to determine the flutter behavior of a flat panel where the finite elements which model the panel each have four degrees of freedom dof a curved panel where the finite elements each have four dof and a curved panel where the finite elements each have six dof the panels are assumed to be of infinite aspect ratio and are subjected to either simply supported or clamped boundary conditions the aerodynamics used by these programs are based on piston theory application of the program is illustrated by sample cases where the number of beam finite elements equals four the in plane tension parameter is 0 0 the maximum camber to panel length ratio for a curved panel case is 0 05 and the mach number is 2 0 this memorandum provides a user s guide for these programs describes the parameters that are used and contains sample output from each of the programs woolley christine l and batina john t langley research center gett ng started w th fus on 360 learn how at the rich features of opnet software this guide is an invaluable reference for it professionals and researchers who need to create simulation models the book also helps newcomers understand opnet by organizing the material in a logical manner that corresponds to the protocol layers in a network why are so many people attracted to narrative fiction how do authors in this genre reframe experiences people and environments anchored to the real world without duplicating real life in which ways does fiction differ from reality what might fictional narrative and reality have in common if anything by analyzing novels such as arundhati roy s the god of small things amitav ghosh s the glass palace zadie smith s white teeth and hari kunzru s the impressionist along with selected latino comic books and short fiction this book explores the peculiarities of the production and reception of postcolonial and latino borderland fiction frederick luis aldama uses tools from disciplines such as film studies and cognitive science that allow the reader to establish how a fictional narrative is built how it functions and how it defines the boundaries of concepts that appear susceptible to limitless interpretations aldama emphasizes how postcolonial and latino borderland narrative fiction authors and artists use narrative devices to create their aesthetic blueprints in ways that loosely guide their readers imagination and emotion in a user s guide to postcolonial and latino borderland fiction he argues that the study of ethnic identified narrative fiction must acknowledge its active engagement with world narrative fictional genres storytelling modes and techniques as well as the way such fictions work to move their audiences the first user s guide to the national electrical code
